

## **Nanotech Surface Solutions™ Metal Kitchen Magic**

### Product Information

#### **Description**

- Protects matte- finished and glossy metal surfaces permanently against fingerprints and minor scratches.
- Reduces soiling and creates easy-to-clean properties by not letting liquids and dirt to stick to the treated surface.
- Due to its powerful surface bonding effect, high chemical and mechanical force resistance is created.
- Prevents rust & corrosion on the treated surfaces.

#### **Suitable Substrates**

- Interior & exterior surfaces of stainless steel, aluminum, metal, chrome
- Refrigerators
- Stainless steel sinks
- Elevators
- Metallic countertops (no food contact)

#### **Other Data**

- Spread rate: 40 square metres/ liter
- The drying time: 1 hour to touch/ 24 hours to completely cure
- Re-coat interval: Does not apply
- Application temperature: minimum 5<sup>o</sup>C to 30<sup>o</sup>C.
- Shelf Life: 24 months in unopened container.

#### **Application**

- Stir contents before application.
- Remove dirt & other soiling with alcohol or thinner. The surface must be completely clean and dry prior to the coating's application. Make sure there's no dust in the air or high humidity levels.
- Mask the areas that are not made out of metal in order to prevent staining.
- Apply a small amount of product using a microfiber cloth or small roller for non-porous surfaces. Make sure there are no visible streaks on the surface.
- Surface will be touch-dry after 1 hour and completely chemically resilient after 24 hours.
- Clean tools with alcohol or a caustic potash solution. Coated and cured surface shall be cleaned with mild commercial cleaners.
