

Nanotech Surface Solutions™ Rain Shield

Product Information

Description

- Clear nano-based protective coating for windshields which creates water repelling characteristics and increases visibility and safety.
- The non-adhesive surface can be cleaned easier and reduces the build-up of ice and road insects.

Suitable Substrates

- Windshields
- Side Mirrors
- Rear window

Other Data

- Spread rate: 5 ml/ square meter
- The drying time: 2 hours but maximum protection reached after 24 hours
- Re-coat interval: Does not apply
- Application temperature: 5- 30°C.
- Shelf Life: 24 months in unopened container.

Application

- Clean the surface very well prior to the product's application. Alcohol should be used to remove all types of contaminants.
- Make sure to clean the windshield wipers too as dirty ones will easily damage the freshly applied sealant.
- Shake the spray bottle vigorously to make sure its contents are mixed thoroughly.
- Spray a small quantity of the sealant to a soft microfiber cloth or pad and wipe it on the glass evenly using a circular motion.
- If you're able to see light gray veils on the surface make sure to keep rubbing the coating until they are gone.
- Once the coating has cured, you will be able to clean your windshield with water and a cloth.
